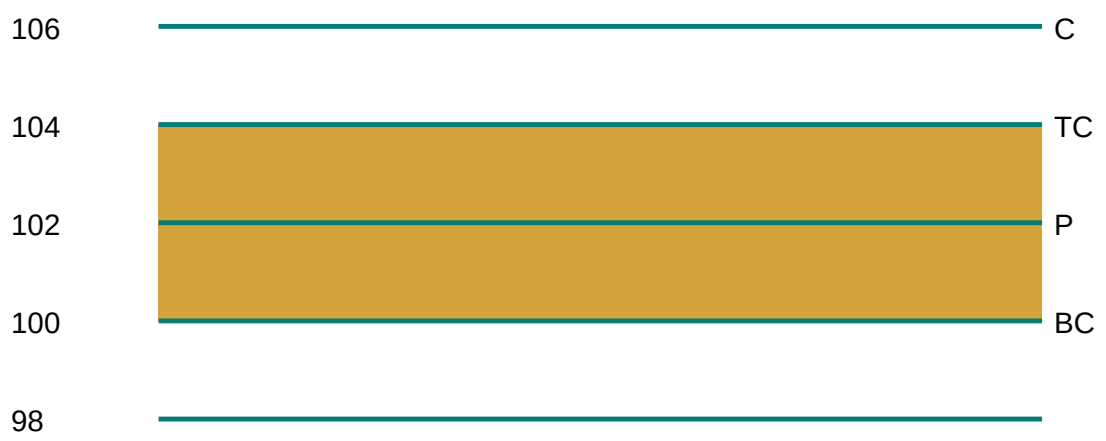
Pivot Trading visual reference

Core concepts, worked examples and practice prompts



Floor pivots and prior session levels

H=110 L=90 C=106 gives P=102, R1=114, S1=94, R2=122, S2=82.

Central pivot range (CPR)

H=110 L=90 C=106 gives P=102, BC=100, TC=104, width=4. If C=94 the edges reverse.

Pivot width analysis

If CPR widths across five sessions are 2,3,4,6,8, a new width 2 is near the low end; it does not predict direction.

Two-period pivot relationships

Yesterday [100,104], today [103,107] overlap with higher edges; [105,109] is entirely above.
