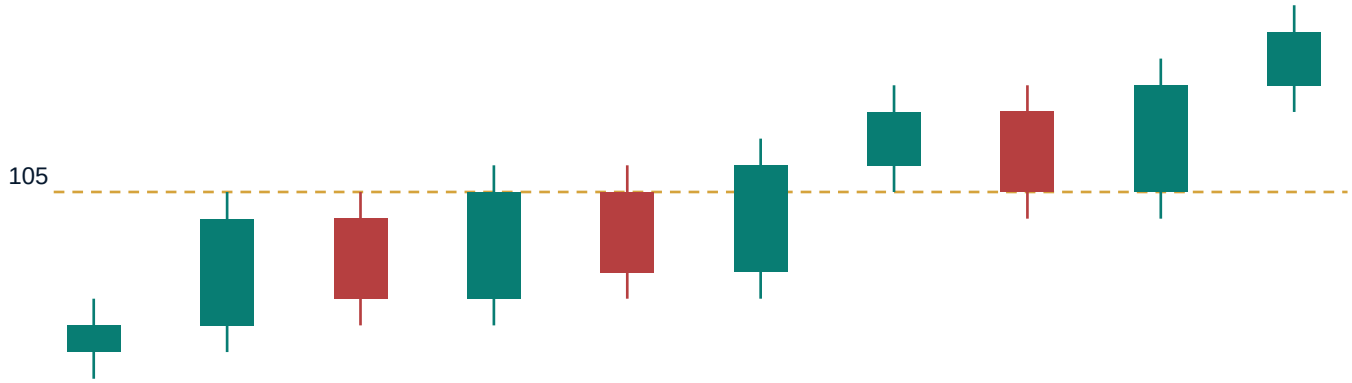
Price action chart atlas

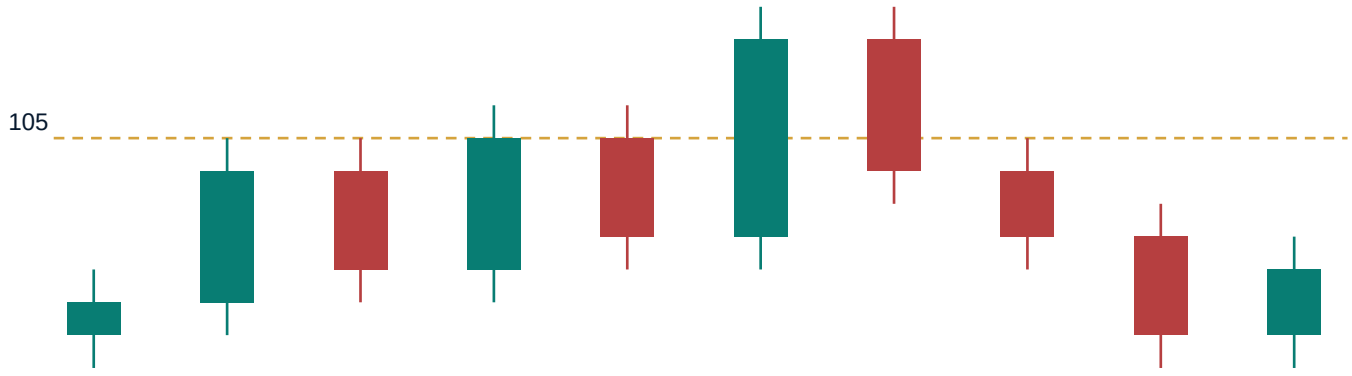
Original synthetic charts | study context and invalidation

Breakout and retest



Repeated resistance gives way; a return to the level is a separate observation. Invalidation: return to prior range under a defined rule.

Failed breakout



Price moves beyond resistance, then returns within the range. Define the failure by a completed close; a wick alone is not sufficient.

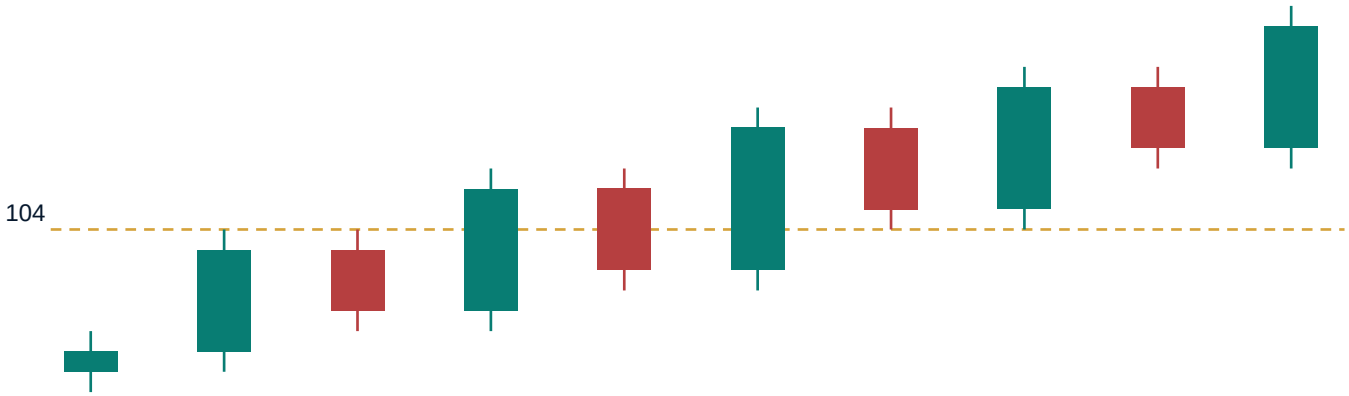
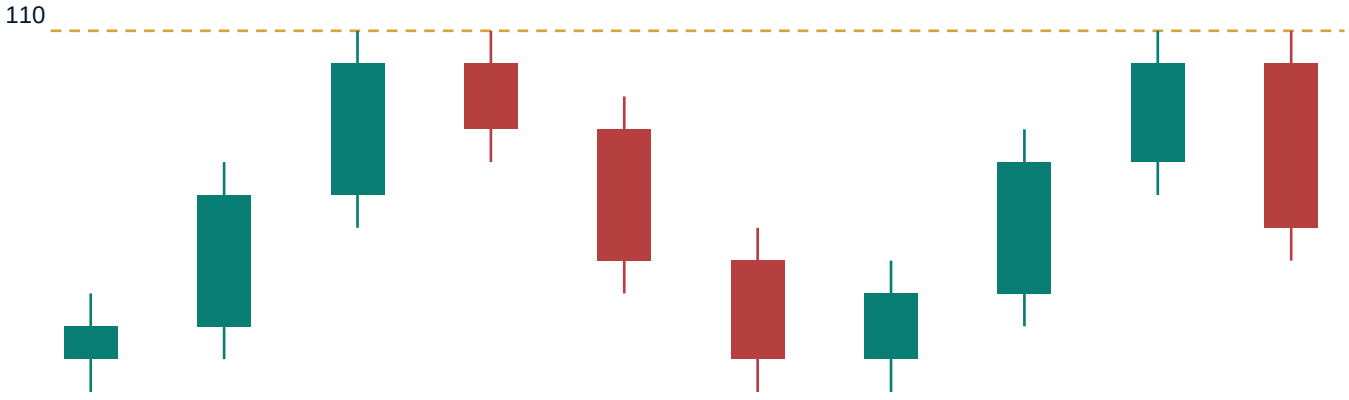
Higher highs and higher lows



Successively higher confirmed highs and lows describe structure. The reference is illustrative, not an automatic buy signal.

Range rejection



Repeated approaches to the upper boundary without sustained acceptance illustrate range behavior. A later breakout remains possible.

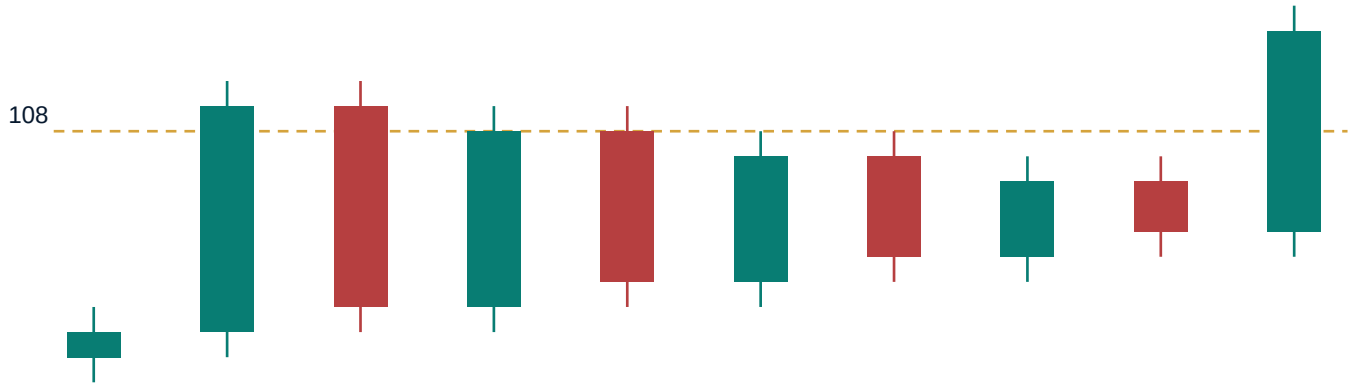
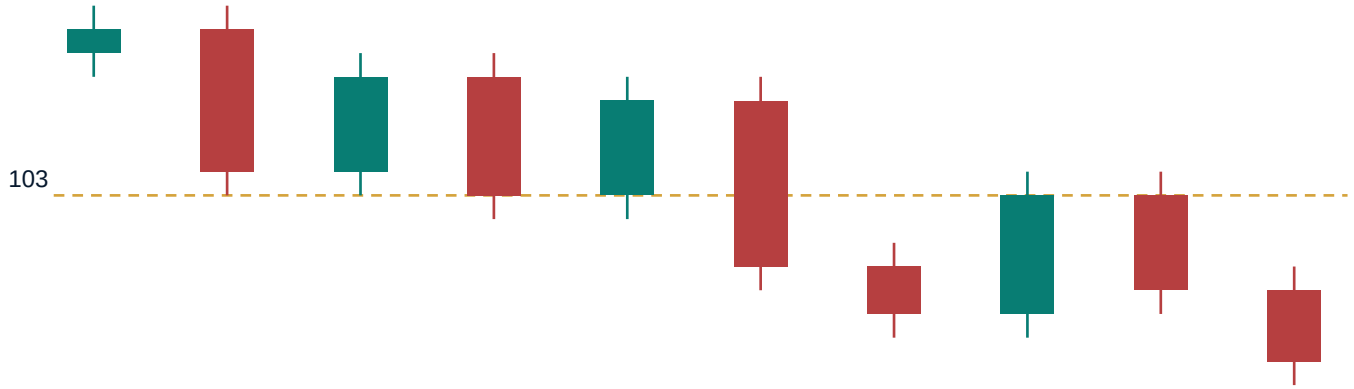
Compression and expansion



Alternating swings narrow before a wider move. Compression does not predict direction or guarantee persistence.

Support break and retest



Price falls through support and revisits it from below. The retest is only known after it occurs; execution can slip.
